LIFELONG RESEARCH OBJECTIVE

My lifelong research objective is to develop artificial intelligence that can tackle problems beyond current human capabilities while remaining aligned with human values and respectful of social diversity. I aim to contribute to solving unresolved real-world challenges responsibly by enabling AI systems to learn continuously through interaction with their environments and to recognize and correct their own errors and biases.

RESEARCH INTERESTS

My research philosophy is grounded in the belief that intelligence and responsibility are not separate goals, but essential qualities that must advance together. My current research focuses on analyzing biases in large language models and developing methods to improve their fairness and reliability. In the long term, I aim to integrate reinforcement learning, AI alignment, and LLM reasoning to build models that learn from feedback, improve autonomously, and adapt flexibly to new problems and environments.
